INTRODUCTION

Roelof is an expert in adult learning and has trained in excess of 15,000 people in his career, whilst authoring, developing and presenting course material in Leadership, Online Marketing, Software Development, Entrepreneurship, Innovation and Project Management. As a Coach and Mentor, Roelof has been actively involved in many industries since 1995 when his career as a Business Consultant kicked off.

As an Agilest, Roelof did his first Agile initiative in 1996 whilst developing a software solution for the life insurance industry and in 2004, Roelof developed a CRM solution for the online gambling industry - using Extreme Programming.

In 2006 Roelof's team also developed automated Search Engine Optimization (SEO) solutions for the online casino industry using Kanban, which ensured that he became an internationally renowned expert in SEO competing in the most competitive online industry internationally.

During his time in the online casino and internet industry, Roelof also took it onto himself to coach and mentor several of the industry's leading affiliates in online marketing, automation of SEO, web development and delivery methodology. With the exception of one affiliate, all others were located in North America, Britain, Europe and Australia. This coaching and mentoring proceeded until late 2009, at which time he started to specialise in one of his other passions, and that is project management.
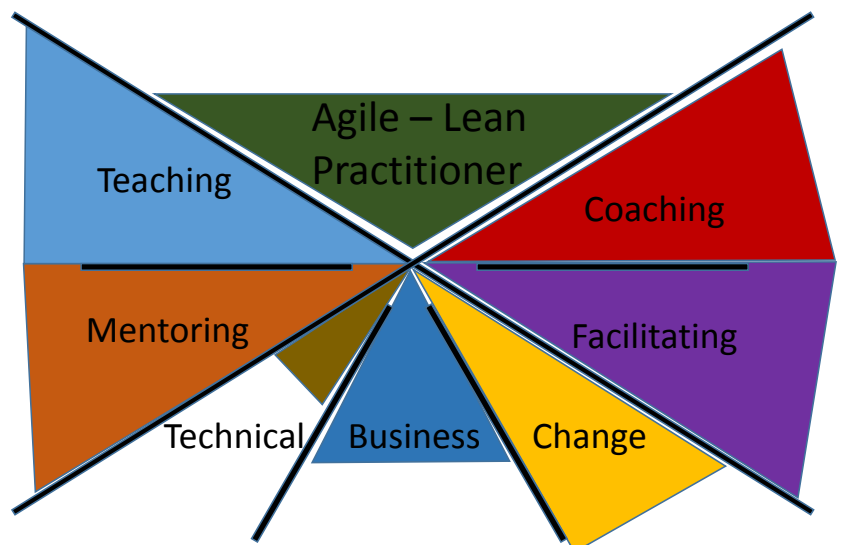

Since 2009 Roelof has acted in the role of Coach and Mentor in project methodologies, frameworks and techniques. Roelof has a firm belief in using the appropriate methodology, framework or techniques for the task at hand. In 2015 he participated in the Barclays adoption of Agile project management with specific emphasis on Scrum. Here he also served in the role of Scrum Master, as well as Scrum Mentor and Coach. At this point, Roelof also developed the Agile Maturity model which was used by Barclays to drive Agile adoption within ESS.

As a leader and builder of teams, Roelof's experience of Agile project delivery and a solid background in innovation and entrepreneurship is complimented with expertise in mentorship, coaching and training.

As a Programme Manager, Roelof is well versed with managing change in a large organisation and this is a very beneficial enhancement of the role of Agile Coach.

Bringing that positive energy to motivate any team, and the ability to learn from fellow team members, are what makes Roelof a valuable workforce.

Agile Coaching Competency Framework
